Summary

Final-year ECE student and full-stack developer with hands-on experience building Python backends and React-based frontends across AI, IoT, and product engineering domains. Proficient in writing clean, scalable, object-oriented Python code and developing responsive, component-driven React/Next.js interfaces. Experienced in agile teamwork, REST API design, and delivering production-ready software end-to-end.

Education

Vishwakarma Institute of Technology (VIT Pune) Pune, Maharashtra
B.Tech. in Electronics & Telecommunication Engineering — GPA: 8.31/10
Nov 2022 – Present

Work Experience

Enovate IT Pune, Maharashtra
Python Developer Intern Jan 2026 – Mar 2026

- Contributed to backend API development using Python, Django REST Framework (DRF), and FastAPI, building and extending 5+ features across an existing production codebase under senior engineer guidance.
- Debugged and refactored 3 API endpoints built with DRF, reducing average response time by ~20% and improving code readability for easier long-term maintenance.
- Participated in agile sprint cycles across 2 sprints, attending daily standups and consistently delivering assigned tasks on schedule.

Geek Solutions Nashik, Maharashtra
SOC Analyst Intern Jul 2025 – Dec 2025

- Assisted the SOC team in monitoring and reviewing security alerts flagged by SIEM tooling on a daily basis, triaging an average of 80+ alerts per week across multiple threat categories.
- Wrote Python scripts to automate parts of the log review process, reducing time spent on manual checks for routine log entries by approximately 35% and improving team throughput.
- Applied Cyber Threat Intelligence concepts directly in daily analyst work, contributing to the review of 500+ log entries over the internship period.

Projects

Athena.ai | *React, Next.js, Python, Langchain, FastAPI, Supabase, Gemini, Tavily* 2025

- Built a full-stack AI assistant with a React/Next.js frontend and Python (Langchain + FastAPI) backend spanning finance, health, and education domains; achieved 90% accuracy with sub-300ms API response latency.
- Designed reusable React components for voice-to-text routing and domain-switching UI; wrote structured test cases to validate classification edge cases and ensure consistent cross-scenario performance.

FairWork | *React, Next.js, Python, Solidity, Polygon, XMTP, Supabase, IPFS* 2025

- Developed the React/Next.js frontend and Python AI arbitration pipeline for a decentralized freelance marketplace on Polygon Amoy Testnet; implemented smart contract escrow to eliminate platform trust dependency.
- Built modular, testable Python modules for dispute resolution logic; validated all REST API flows with Postman across multiple network conditions and edge cases (concurrent releases, upload failures, timeouts).

CommunityAI | *React, Python, FastAPI, OpenAI Whisper, Streamlit, Discord API* 2024

- Built an AI platform for meeting transcription and content moderation using Python (FastAPI); applied clean OOP architecture automating minutes and action item extraction at 90% accuracy.
- Developed the React frontend dashboard and Discord bot UI; tuned moderation thresholds through functional testing to reduce false positives, cutting manual workload by 70%.

Technical Skills

- Languages:** Python, JavaScript (ES6+), TypeScript, SQL, C++, Bash/Shell Scripting, Solidity
- Frontend (React):** React.js, Next.js, Shadcn UI, Tailwind CSS, Framer Motion, GSAP, React Three Fiber
- Backend (Python):** FastAPI, Django, Django REST Framework (DRF), Node.js, REST API Design, WebSockets, PostgreSQL, MongoDB, Redis
- AI/ML:** TensorFlow, PyTorch, OpenCV, Langchain, NLP, Object Detection, Computer Vision
- Cloud & DevOps:** Docker, AWS, Supabase, IPFS, Git, GitHub, Linux
- Testing & Debugging:** Pytest, Debugging & Troubleshooting, API Testing (Postman), Edge Case Handling, Functional Testing

Awards & Certifications

- Technoxian World Robotic Championship** — Silver Medalist, Line Following Robot 2023
- NVIDIA Deep Learning Certification** — Verified proficiency in deep learning and accelerated computing 2024
- Advanced Quantum Computing** — Qubit by Qubit, Google-sponsored 2024
- IBM DevOps and Software Engineering** — Coursera Certification 2025
